We are not submitting the same cDNA sequence redundantly t
Re are not submitting the same ciformation of clones with t
sequence in this library and as well as in other 3'-direct
libraries, see 'http://www.imcb.osaka- u.ac.jp/bodymap'.
sequences of the clones represented by this GS sequences:
Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Eutele
Mammalia, Eutheria, Primates, Catarrhini, Hominidae, Homo.

Equal amounts of plasmid DNA from three normalized libraries (fetal lung NbHL19W, testis NHT, and B-cell NCI CGAP GCB1) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was were as tracer in a subcractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made Iron the same 3 libraries. The pools consisted of Iron the same 3 libraries. The pools consisted of Iron the same 3 libraries. The pools consisted of 1.M.A.G.E. clones 297480-302087, 682632-687239, 726408-728711, and 729096-731399. Subtraction by Bento Soares and M. Fatima Bonaldo. "

is factor related ligand - useful for, e.g. treating cancer, lisease and immune responses to tissue grafts.

3 48-50; 69pp; English

al compositions to treat cancer, autoimmune diseases or as uses to tissue grafts, or to stimulate or suppress the immune is useful to screen for TRELL receptors, by labelling with a shell and screening compositions for binding. Agents with TRELL receptor binding can also be screened for, can nistered, optionally with interferon gamma, to induce cell at, suppress or alter immune responses (sepecially involving a recinoma cells) involving a signal pathway between TRELL and The DNA sequence can be used in gene therapy for TRELL repars in mammals (sepecially involving the second of the s amounts is that encoding human tumour necrosis factor related ligand rders in mammals (especially humans), e.g. tumours, nd inflammatory diseases or inherited genetic disorders, by into cells, and expressing, therapeutically effective amount e.g. a virus comprising a gene encoding TRELL. It may also the preparation of prepare probes for screening hetic DNAs for TRELL-encoding sequences and for antisense or active fragments can be included with a carrier in

c comprising a core, and at least one external loop, useful processes of bone formation or inhibiting bone resorption, a treatments for disease or condition characterized by loss

ge 66-67; 78pp; English.

aquence is that of a polynucleotide encoding a non-RANKL tummour necrosis factor (TNF) superfamily. The invention naturally-occurring proteins that contain one or more of the protein core of RANKL (see ABR42066-70) in combination with a protein core obtained from a non-RANKL member of the TNF Also provided are polynucleotides encoding such proteins. bind to RANK, acting as mimics of RANKL. They can be used to formation by either inhibiting bone resorption or inducing thus providing treatment for diseases or conditions by loss of bone mass

sequence is that of a polynucleotide encoding human TWEAK. In relates to compositions comprising heterotrimeric complexes orcosis factor (TNF) ligand family members, and their use in prevention and treatment of disease. In one embodiment, imeric complex comprises full-length or extracellular TWEAK and full-length or extracellular portions of other TNF y members, preferably VEGI or VEGI-SV. The heterotrimeric the invention are useful for treating an autoimmune disease, iteoporosis, and particularly for inhibiting cancer cell m, increasing B cell proliferation, or inducing apoptosis of

land ninety two polynucleotides derived from a variety of sources which encode secreted proteins, useful for treating sencies and disorders such as autoimmune disorders.

le 82; 372pp; English.

in relates to 592 polynuclectides which have been derived from human tissue sources and which encode novel secreted is polynuclectides can be used as probes for the on and isolation of full length cDNA and genomic DNA. The des and proteins can also be used as nutritional supplements.

The proteins are useful in the treatment of various immune deficiand disorders such as viral infections, bacterial infections, fun infections, autoimmune disorders (e.g. rheumatoid arthritis, mult sclerosis, autoimmune thyroiditis and diabetes) and allergic read and conditions (e.g. asthma). They are also useful for treating neurodegenerative diseases (e.g. Altheimer's disease, parkinson's disease), liver fibrosis, coagulation disorders (e.g. haemophilis inflammatory disorders (e.g. Crohn's disease) and tumours. They a useful for tissue regeneration, for wound healing and in the trea hurns, incisions and ulcers. The proteins are also useful for recharactopolesis and for treating myeloid or lymphoid cell deficier Sequences ABK34863-ABK35454 represent polynucleotides of the inve AGTIGCACCTAAAGGCCCGGAAAACACGGGCTCGAAGAGCGATCGCAGCCCATTATG CTCAAGGCTGCCCCTTCCTCACCTACTTCGGACTCTTCCAGGTTCACTGAGGGC 5 Techerodecoderecetrecetrocedanicerredonecedandos 85 CAGGCACAGCCCCCCCCCATGGCCGCCCGTCGGAGCCAGAGGCGGAGGGGG 65 CAGGCACAGCCCCCCCCCCCATGGCCGCCCGTCGGAGCCAGAGGCGGAGGGGGGC TGCCTCGGCCTCCTGCTGGCCGTGGTCAGTTTGGGGGAGCCGGGCATCGCTGTCCG recercescerecrecescerestrastrasseasecescerescristes GAGCCTGCCCAGGAGGAGCTGGTGGCAGAGGAGCACCAGGACCCGTCGGAACTGA CAGACAGAAGAAAGCCAGGATCCTGCGCCTTTCCTGAACCGACTAGTTCGGCCTC CAGACAGAAAGCCAGGATCTTGGCTTTCCTGAACCAACTAGTTGGCCTT AGTECACCTAAAGGCCGGAAAACACGGGCTCGAAGAGCGATCGCAGCCCATTATG 505 GAGGAAGCCAGAATCAACAGCTCCAGCCCTCTGCGCTACAACCGGCCAGATCGGGG ses atagicaccessseressericiaciacietaristeasserscacitisaisasses 545 ATAGTCACCCGGGCTGTACTACTACTGTACTGTCAGGTGCACTTTGATGAGG 625 GCTGTCTACCTGAAGCTGGACTTGCTGGTGGATGGTGTGCTGCCCTGCGCTGCC 685 GAATICICAGCCACIGCGGCCAGIICCCICGGGCCCCCAGCICCGCCICIGCCAGG <u> saárricricasciaciascascaastricicricassicicicasciricisciristicas saárricricas sa a sa a sa a sa a sa a sa a s</u> gescrietrescecriscesceagesrecrecersessaareeseacereee esecterrescentececcases concerces establicados es establicados en establicados establicados establicados establicados establicados establicados establicados en establicados establicados establicados establicados establicados establicados establicados establicados establicados establicados en establicados establicados establicados establicados en establicados en establicados en establicados en establicados en establicados en establicados en establicados en establicados en establicados en establicados en establicados en establicados en establicados en establicados en establicados en establicados en establicados en entre en establicados en entre en establicados en establicados en establicados en establicados en entre en establicados en entre en entre en establicados en entre entre en entre en entre en entre en entre en entre en entre en entre en entre en entre en entre en entre entre en entre e gagaaccagacaccaccaracrasrccacrcacacaacaaccraaaccraaaccraaaca 0; DB 6; Length 1364; Sequence 1364 BP; 246 A; 461 C; 394 G; 263 T; 0 U; 0 Other; Indels 5; Mismatches Score 1247; Pred. The present sequence is that of cDNA clone DNA30879-1152 (AICC 205 encoding human PRO207 (see AAY95338), which shows homology to seve members of the tumnour necrosis factor family, especially human [1] in the cDNA was identified in a foetal kidney of library following identification of an expressed sequence tag with homology to human Apo-2 ligand. A claimed method for inhibiting the composity to human Apo-2 ligand. A claimed method for inhibiting the pro207, PRO30, PRO219, PRO221, PRO324, PRO328, PRO301, PRO506, PRO3056, PRO309, or PRO866 (see AAY95337-49), their agonists or chim peptides incorporating them. The tumour cally a cancely selected from breast, ovarian, renal, colorectal, uterine, prostation, bladder and central nervous system cancer, melanoma and leui which continuous encomposition in the recombinant procession.

```

The present invention relates to the isolation of novel human PR polypeptides and the polynucleotide sequences encoding them. The polypeptides, agonists, antagonists or anti-PRO antibodies are us treating benign or malignant tumours (e.g. renal, kidney, bladdebreast, etc), leukaemias and lymphoid malignancies, other disord as neuronal, glial, astrocytal, hypothalamic, glandular, macroph stromal and blastocolic disorders, inflammatory, immune and ang disorders. The polynucleotide sequences are also useful in gene ABK40254-ABK40288 encode for the human PRO polypeptides of the i leukaemia; neuronal disorder; stromal disorder; blastocoelic disoinflammatory disorder; immune disorder; angiogenic disorder; gene therapy; cytostatic; neuroprotective; gene; ss. 109 GCCGCCCGTCGGAGCCAGAGGCGGAGGGGCGCGGGGGGGAGCCGGGAACCCGCCC greececreactragecragecragecragecragecracereactrage Thirty five nucleic acids encoding PRO polypeptides, useful for benign or malignant tumors, leukemias and lymphoid malignancies, inflammatory, angiogenic and immunologic disorders. The present sequence encodes a human tumour necrosis factor (TNF) lymphotoxin homologue designated Apo-3 ligand, Apo-3 ligand has sytosteatic activity. Apo-3 ligand can be used to induce apoptosis mammalian cancer cells, to induce NF-kappaB-dependent transcript: to induce UNK/SAPK-dependent responses in mammalian cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1261 TTCCCTGTGGATTTTTAAAACAGATATTATTTTTTATTATTATTATGTGACAAAATGTTT

The TNF-related endothelium proliferative agent (TREPA), or its activators or agonists, are used to treat a deficit of TREPA, expremely activators or agonists, are used to treat a deficit of TREPA, expremely also to induce apoptosis for treating cancer and eliminating autor calls, as an adjunct to cancer chemotherapy or antiviral treal TREPA peptides can also be used to target cytotoxic agents or for affinity isolation of the corresponding receptor, the nucleic and affinity isolation of the corresponding receptor, the nucleic and infinity and be used to transform tumour cells to reader them more capponsive to TREPA and to screen for TREPA mimics. Ribozymes, it inflammation or a wide range of autoimmune conditions, condition inflammation or a wide range of autoimmune conditions, condition at the prosclerosis), for bitth control (inhibiting ownlation and process).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ั บั

The present invention relates to extracellular signal molecules, particularly members of tumour necrosis factor (TNF) family molec designated as TREPA (TNF related endothelium proliferative agent) Soluble biologically active TREPA are used to treat TREPA-associal diseases, tumours or metastases. TREPA is used for inducing angic in human for promoting wound healing and for vaccularising grafts for successful grafting and to promote tissue grafts. The present sequence is a cDNA clone ID #690050 encoding human TREPA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Inducing angiogenesis in mammal at desired sites for promoting we healing, by administering soluble fragment of extracellular domaitumor necrosis factor related endothelium proliferative agent pro

This invention describes isolated Tumor Necrosis Factor (TNF) fareceptor polypeptides: APO4, APO6, APO8 and APO9 or their active receptor polypeptides: APO4, APO6, APO8 and APO9 or their active fragments, and isolated TNF related ligands I and 3 TMRLI and I their active fragments APO4 is useful for diagnosing prostate cancer can determining levels of APO4 in an individual. Prostate cancer can determining levels of APO4 in an individual. Prostate cancer can determining aponts linked to a therapeu moiety. APO4 polypeptides are also useful for identifying select binding agents, to the polypeptide/active fragment which is extracellular expressed on the cell surface. The binding is preferably perform vivo. APO4 polypeptides/active fragments are also useful for so vivo. APO4 polypeptides/active fragments are also useful for so vivo. APO4 polypeptides/active fragments are also useful in diagnosis consists and antagonists by binding and observing the change for agonists and antagonists by binding and observing the change cutivity. Effective pharmacological agents useful in diagnosis, continue of disease are also identified using APO4 polypeptides for greated in vivo or in vitro. APO polyte activity. The method is performed in vivo or in vitro. APO polyte are all useful as immunogens for preparing antibodies. APO4 is cuseful for diagnosis/treatment of developmental or gestational abnormalities. APO8 was transfected to human breast carcinoma of MCP-7, and induced apoptosis New Tumor Necrosis Factor family receptor polypeptides and ligan useful for diagnosis and treatment of prostate cancer and develo Example VII; Fig 13A; 156pp; English. or gestational abnormalities. The sequence represents a DNA from the expression vector pDC409-L which encodes a fusion protein comprising a growth hormone leader leuchne sipper multimerisation domain, and the extracellular doma human TWBAK. The fusion protein was used in the isolation of human receptor (TWEAKR) expressing clones from a COS cell human CDNA list receptor (TWEAKR) expressing clones from a COS cell human CDNA list a member of the tumour necrosis factor (TNF) and induces angiogenesis. TWEAKR may therefore be used to screen develop TWEAKR agonists and antagonists for the modulation of angiogenesis, to be used in the treatment and diagnosis of human The disorders mediated by angiogenesis include ocular disorders characterised by ocular neovascularisation such as diabetic retirence neovascular glaucoma, retinoblastoms, retinoblastoms of premeturity, retrolental fibroplasis, unbeosis, uveitis, macular degeneration corneal graft neovascularisation, and inflammatory diseases such an inflammatory diseases incomparation and menageral corneal graft neovascularisation. malignant and metastatic conditions such as sarcomas and carcinom benign tumours and preneoplastic conditions, myocardial anglogene haemophilic joints, scleroderma, vascular adhesions, atherosclero neovascularisation, telangiectasia, wound granulation, cor atherosclerosis, peripheral atherosclerosis and

the interior tenaces to an insurance posture comparing and 38043 CDNA sequences, appearing as ACH12789-ACH50831, whose sequence determined by the technique of SBH (sequencing by hybridisation). Included is a purified polypeptide comprising a sequence correspond a reading frame of the novel polymucleotide. The nucleic acid sequencing frame of the novel polymucleotide. The nucleic acid sequencing frame of the novel polymucleotide. The nucleic acid sequencing frame of the novel polymucleotide. The nucleic acid sequencing expressed genes or for physical mapping of the human in forensics, in assessing biodiversities, or in identifying muta responsible for genetic disorders and other traits. The nucleotid sequences are also useful as hybridisation probes, as oligomers for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA. The purified poly is useful for generating antibodies specific for it. The present for this patent did not form part of the printed specification, the obtained in electronic format directly from USPTO at
                                                                                        New polynucleotide sequences obtained from various cDNA libraries as hybridization probes, as oligomers for PCR, for chromosome and mapping, in the recombinant production of protein, or in generati
                                                                                                                                                                                                                                      The invention relates to an isolated polynucleotide comprising an

olynucleotide encoding a polypeptide comprising a portion : protein, for detection, diagnosis and therapy of human

133; 211pp; English.

relates to an isolated polynucleotide (I) encoding a (II) comprising a portion of a colon tumour protein. A new le (III) that hybridises to (I) is useful for determining a cancer in a patient. (II) or antigen presenting cells are useful for stimulating and/or expanding T cells (tumour protein, by contacting T cells with (I), (II) or uting cells that express (I) are useful for treating colon cancer by incubating CD4+ and/or CD8+ T cells isolated from a (I), (II), or antigen presenting cells that express (II) so yincubating CD4+ and/or CD8+ T cells that express (II), or antigen presenting cells that express (II), or antigen presenting cells that express (II), so proliferated T cells, thus inhibiting the development of a patient. A new composition is useful for stimulating an patient. (I) or (II) is useful in vaccines and compositions for prevention and treatment of colon cancer agnosis and monitoring of the cancers. (I), (II) or an ist (II) is useful for detection, diagnosis and/ or therapy cancer. (I) is useful for detection, diagnosis and or therapy cancer. (I) is useful as a probe or primer for nucleic thous, and in the design and preparation of ribozyme calls. sent human colon adenocarcinoma-specific cDNA sequences of

dard; cDNA to mRNA; 282 BP

A single-stranded DNA (or its complementary strand or the corresp cstranded DNA) which comprises one of the 7837 "GS" sequences give AAT19001-T26817 and which is able to hybridise to part of human g DNA, cDNA or mRNA is claimed. The GS (Gene Signature) sequences we obtained from 3'-directed cDNA libraries prepared from various huritiseus; synthesis of CDNA was initiated from the 3'-end of mRNA poly!(T) as the sole primer. Since the 3'-untranslated sequence with specific mRNAs a Bach library is constructed so as to reflect accurately the relative abundance of different mRNAs in the partic in a cDNA library can be determined (esp. using primers and probe derived from the GS sequences) as a means of diagnosing abnormal Single-stranded DNA for identifying gene signatures - isolated fradirected human cDNA library that reflects relative abundance of  $\alpha$ Gene signature; messenger RNA; mRNA; relative abundance; frequency human; cloning; mapping; non-biased library; diagnosis; detection, cell typing; abnormal cell function; ss. transcript detection oligonucleotide SEQ ID NO:31596.

New oligonucleotide libraries comprising oligonucleotides which selectively hybridize to mRNAs transcribed from a transcription ugenome, useful for detecting tissue-, pathology-, and development Human, mouse, rat, splice transcript, detection, RNA transcript, splice variant, transcriptome, oligonucleotide library, ss. Faigler S; Mintz L, Mintz E, 20-JUL-2001; 2001WO-IB001903. 28-JUL-2000; 2000US-0221607P. 02-MAY-2001; 2001US-0287724P. Wasserman A, (COMP-) COMPUGEN INC. WPI; 2002-257383/30. WO200210449-A2 Homo sapiens. 07-FEB-2002 Shoshan A, 

The present invention describes oligonucleotide libraries for det messenger RNAs that populate a (sub-)transcribtome, where the (st present inventione comprises messenger RNAs transcribed from multiple transcription units that populate a genome. The library comprises oligonucleotides, each capable of hybridising selectively to a sc messenger RNAs transcribed from a given transcription unit of the which encodes one or more messenger RNA splice variants. The oligonucleotide libraries are useful for detecting mRNAs from a contract of the sample, in expression profilling studies, in qualitative plological sample, in expression profilling studies, in qualitative cuantitatively characterishing the corresponding transcriptome, and detecting RNA transcripts and splice variants of human or animal cuantitatively characteristing the corresponding transcriptome, and pathology-specific genes such as those genes only expressed pecific tissue under a specific pathological condition; to detection variants of a transcriptome of a patient suffering from a particuation of the sorder. ABN27253 to ABN59589 represent oligonucleotide sequence rates, humans and mice, which are used in the exemplification of the particual or present invention. When the exemplification of the present invention. of the printed specification, but was obtained in electroni directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences Example 1; SEQ ID NO 31596; 47pp; English specific genes.

eotide libraries comprising oligonucleotides which sybridize to mRNAs transcribed from a transcription unit of a l for detecting tissue-, pathology-, and developmental-

Q ID NO 31339; 47pp; English

nvention describes oligonucleotide libraries for detecting a that populate a (sub-)transcriptome, where the (subwe comprises messenger RNAs transcribed from multiple
units that populate a genome. The library comprises several
des, each capable of hybridising selectively to a set of
a transcribed from a given transcription unit of the genome,
one or more messenger RNA splice variants. The
de libraries are useful for detecting mRNAs from a
miple, in expression profiling studies, in qualitatively or
y characterising the corresponding transcriptome, and in
transcripts and splice variants of human or animal
s: The libraries may also be used as specialised mini
detect transcripts of a sub-transcriptome under a particular
pathological state, and so allowing the detection of tissue
yy specific genes; and to detect confittion; to detect
specific genes; and to detect for a for a for a for a splice
specific genes; and to detect for a for a for a for a for a for a splice ntion, N.B. The sequence data for this patent did not form printed specification, but was obtained in electronic format transcriptome of a patient suffering from a particular 127253 to ABNS9589 represent oligonucleotide sequences from which are used in the exemplification of the WIPO at ftp.wipo.int/pub/published\_pct\_sequences mice,

The present invention describes oligonuclectide libraries for det messenger RNAs that populate a (sub-)transcribcome, where the (stranscriptome comprises messenger RNAs transcribed from multiple transcription units that populate a genome. The library comprises oligonuclectides, each capable of hybridising selectively to a selection ender the configuration unit of the which encodes one or more messenger RNA splice variants. The oligonuclectide libraries are useful for detecting mRNAs from a biological sample, in expression profiling studies, in qualitative quantitatively characterising the corresponding transcriptome, and quantitatively characterising the corresponding transcriptome, and cutenting RNA transcripts and splice variants of human or animal transcriptomes. The libraries may also be used as specialised militaries to detect transcripts of a sub-transcriptome under a pictological state, and so allowing the detection capacitic tissue under a specific pathological condition; to detect specific tissue under a specific pathological condition; to detect specific tissue under a specific pathological condition; to detect specific tissue under a specific pathological condition; to detect specific genes; and to detect RNA transcripts and so variants of a transcriptome of a patient suffering from a particut disorder. ABN27531 to ABN5589 represent oligonucleotide sequence. New oligonucleotide libraries comprising oligonucleotides which selectively hybridize to mRNAs transcribed from a transcription  $\upsilon$  genome, useful for detecting tissue-, pathology-, and development rats, humans and mice, which are used in the exemplification of tpresent invention. N.B. The sequence data for this patent did not part of the printed specification, but was obtained in electronic directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences Mintz E, Mintz L, Faigler S; Sequence 60 BP; 17 A; 15 C; 15 G; 13 T; 0 U; 0 Other; Example 1; SEQ ID NO 31597; 47pp; English. 28-JUL-2000; 2030US-0221607P. 02-MAY-2001; 2001US-0287724P. 3- ligand (a tumor necrosis factor) homologue.

evention describes a human tumour necrosis factor (TNF) and omologue designated Apo-3 ligand. Apo-3 ligand has civity. Apo-3 ligand can be used to induce apoptosis in cer cells, to induce NF-kappaB-dependent transcription and /SAPK-dependent responses in mammalian cells. The present seents an Apo-3 ligand probe, which is used in an example ent invention

Novel composition to inhibit neoplastic cell growth or for treati in mammal comprises polypeptides PRO179, PRO207, PRO320, PRO219, PRO224, PRO328, PRO301, PRO526, PRO362, PRO356, PRO509 or PRO866.

Example 3; Page 98; 172pp; English.

The present sequence is that of a DNA probe based on an isolated expressed sequence tag showing homology to human Apo-2 ligand. The was used to screen a human foetal kidney cDNA library to identify clone DNA30879-115.2 (see AAA49717), which encodes human artitumou protein PRO207 (see AAA95138). A claimed method for inhibiting the for a tumour cell comprises exposing the tumor cell to PRO179, PRO PRO30, PRO21, PRO21, PRO24, PRO388, PRO31, PRO509 or PRO866 (see AAY55337-49). The tumour is especially brea ovarian, renal, colorectal, uternie, prostate, lung, bladder or nervous system cancer, melanoma or leukaemia. Nucleic acids encod PRO179 etc. are used in the recombinant production of antitumour polypeptides

The invention relates to a system for detecting gene expression, comprises one or two isolated DNA molecules that detect expressic gene, where the gene corresponds to any of 8143 oligonucleotides (ABZ00010-ABZ08152) each having 50 base pairs (bp). The system is for leukocyte expression profiling. It is particularly useful for diagnosing a disease, monitoring (rate of) progression of a disea predicting therapeutic outcome, determining prognosis for a patic predicting disease complications in an individual or monitoring it treatment in an individual. The diseases include cardiac allogation, kidney allografit rejection, liver allogatic rejection, atherosclerosis, congestive heart failure, systemic lupus erythem rheumatoid arthritis, osteoarthritis or cytomegalovirus infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Tumour necrosis factor receptor; signal transducer molecule; TNF developmental abnormality; gestational abnormality; prostate G APO6; APO8; APO9; TNRL-1; TNRL-3; diagnosis; treatment; therapy; cytoplasmic domain; immunogen; antibody preparation; breast carc.

n describes isolated Tumor Necrosis Factor (TNF) family peptides: APO4, APO6, APO8 and APO9 or their active disolated TNF related ligands 1 and 3 (TNRL1 and TNRL3) or fragments. APO4 is useful for diagnosing prostate cancer by evels of APO4 in an individual. Prostate cancer can also be APO4 selective binding agents linked to a therapeutic polypeptides are also useful for identifying selectives, useful in diagnosis/treatment of disease by binding of polypeptide/active fragment which is extracellular, or the cell surface. The binding is preferably performed in lypeptides/active fragments are also useful for screening and antagonists by binding and observing the changer in APO4 disease are also identified using APO4 polypeptides/active APO4 signal transducer molecules that specifically interact asmic domain of APO4 and detecting a change in level of APO4 method is performed in vivo or in vitro. APO polypeptides method is performed in vivo or in vitro. APO polypeptides agnosis/treatment of developmental or gestational duced apoptosis

Tumour necrosis factor related ligand - useful for, e.g. treating auto-immune disease and immune responses to tissue grafts.

Claim 2; Page 45-46; 69pp; English.

The sequence is that encoding mouse tumour necrosis factor relate (TRELL). TRELL or active fragments can be included with a carrier pharmaceutical compositions to treat cancer, autoimmune diseases immune responses to tissue grafts, or to stimulate or suppress the system. It is useful to screen for TRELL receptors, by labelling detectable label and screening compositions for binding. Agents interfering with TRELL receptor binding can also be screened for, then be administered, optionally with interferon-gamma, to induct death or treat, suppress or alter immune responses (especially in human adenocarcinoma cells) involving a signal pathway between TR its receptor. The DNA sequence can be used in gene therapy for TR related disorders in mammals (especially humans), e.g. tumours, autoimmune and inflammatory diseases or inherited genetic disorder introducing into cells, and expressing, therapeutically effective of a vector, e.g. a virus comprising a gene encoding TRELL. It me be of use in the preparation of prepare probes for screening therapeutically synthetic DNAs for TRELL-encoding sequences and for antist the preparation of prepare probes for screening cherapy

```
The present invention relates to a method for predicting a toxic of a compound. The method comprises preparing a gene expression of a tissue or cell sample exposed to the compound, and comparing gene expression profile to a database comprising SEQ ID 1-4925, differential expression of the gene indicates at least one toxic The method is useful for predicting at least one toxic effect of compound, predicting hepatotoxicity or the progression of a toxic of a compound, identifying an agent that modulates the onset or progression of a toxic response, predicting the cellular pathway compound modulates in a cell, and identifying an agent that module present invention using a database of genes having liver toxin-idefferential expression, are useful in identifying proxicity mark
Predicting a toxic effect of a compound, useful in identifying t markers in liver tissues or cells for drug screening and toxicit comprises preparing gene expression profile of tissue or cells e

nvention relates to the isolation of novel human PRO (AAU86128-AAU86162) and the polynucleotide sequences. The PRO polypeptides, agonists, antagonists or anti-PRO e useful for treating benign or malignant tumours (e.g., bladder, breast, etc), leukaemias and lymphoid other disorders such as neuronal, glial, astrocytal, glandular, macrophagal, stromal and blastocoelic disorders, immune and angiogenic disorders. The polynucleotide also useful in gene therapy. The present sequence PCR primer used in the methods of the present invention

cid encoding a translationally controlled tumor protein, eating, preventing and diagnosing viral, tumor or diseases.

```
The present invention relates to novel nucleic acid sequences (AE MEZ79313), which are involved in the molecular pathways of tumour suppression, tumour reversion, apoptosis and/or virus resistance. sequences are also useful for treatment or prevention of viral, the sed diseases, and also for diagnosis and prognotese are also useful for treatment or prevention of viral, the secuence data for this patent is not represented in the printed specification but is based on sequence information supplied by the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; tumour suppressor; virucide; cytostatic; nootropic; neuroprotective; neuroleptic; gene therapy; tumour suppression; tumour reversion; apoptosis; viral resistance; viral infection; cell degeneration; Alzheimer's disease; schizophrenia; cancer; o

The present invention relates to human oligonucleotides (Ab208841 AB209860). The expression of the oligonucleotides is implicated is suppression or reversion, apoptosis and/or viral resistance. The oligonucleotides are useful for preventing and/or treating viral infection, tumour development and cell degeneration (e.g. Alzheim New human nucleic acid, useful for diagnosis, prognosis and treat e.g. of tumors, also related vectors, transformed cell, polypepti antibodies. disease and schizophrenia), especially cancer Susini L; Disclosure; Page 120; 189pp; French. COMMENT

REFERENCE

The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indica order and orientation of each sequence contrig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g. human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8X average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associat with a Phrap-derived quality score.

Quality coverage: 12.65x in Q20 bases; agarose-fp Quality coverage: 11.08x in Q20 bases; sum-of-contig Sequencing vector: plasmid; n/a; 100% of reads Chemistry: Dye-terminator Big Dye; 100% of reads Assembly program: Phrap; version 0.990319 consensus quality: 215255 bases at least Q30 Consensus quality: 215255 bases at least Q30 Insert size: 190000; agarose-fp Insert size: 216885; sum-of-contigs

\* NOTE: This is a 'working draft' sequence. It currently consists of 17 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that har provided by the submittor.

\* This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

\* 7549 7648: gap of unknown length 7549 31917: contig of 7548 bp in length 7649 31917: contig of 24269 bp in length 7649 31917: contig of 24269 bp in length 7649 31917: contig of 18416 bp in length 7649 35018 50434 50531 gap of unknown length 7649 55375 95374: contig of 44741 bp in length 76598 100088: gap of unknown length 769989 100088 unknown length of 7646 bp in length of 10906 bp in unknown length unknown length 117719: gap of u 128625: contig o 128725: gap of u 143521: contig o gap of contig 117619: 0 109973: 117620 117720 128626 109874 109974

셤 βp g ð 셤 셤 g g g g П ઠે ò ò ð õ ð à ò ð qq à ð q à 셤 relates to 592 polynucleotides which have been derived from unman tissue sources and which encode novel secreted polynucleotides can be used as probes for the and isolation of full length cDNA and genomic DNA. The sand proteins can also be used as nutritional supplements. It useful in the treatment of various immune deficiencies such as viral infections, bacterial infections, fungal troimmune disorders (e.g. rheumatoid arthritis, multiple oimmune thyroiditis and diabetes) and allergic reactions (e.g. asthma). They are also useful for treating ive diseases (e.g. Alzheimer's disease, Parkinson's if fibrosis, coagulation disorders (e.g. heemophilia), isorders (e.g. crohn's disease) and tumours. They are also seue regeneration, for wound healing and in the treatment of ms and ulcers. The proteins are also useful for regulating and in the treatment of and for treating myeloid or lymphoid cell deficiencies. 244 204 264 564 ACAGCCCCCCCCCCATGGCCGCCCCTCGGAGCCAGAGGCGGAGGGGGCGCCGG 144 124 184 324 304 AGAAGAAAGCCAGGATCCTGCGCCTTTCCTGAACCGACTAGTTCGGCCTCGCAGA 384 364 444 424 504 484 and ninety two polynucleotides derived from a variety of cources which encode secreted proteins, useful for treating ancies and disorders such as autoimmune disorders. 84 64 CGGCCTCCTGCTGGCCGTGGTTTGGGGAGCCGGGCATCGCTGTCCGCCCAG CCGCCGGCTCCCCTCCCCGATCCCTCGGGTCCCGGGATGGGGGCGGTGAGG coccescroccorrectedarecricesareceressares ACAGCCCCCCCCCCCCATGGCCGCCCCTCGGAGCCCAGAGGCGGAGGGGCGCCGG GCCGGGCACCGCCCTGCTGGTCCCGCTCGCGCTGGGCCTGGGCCTGGGCCTGGCC CGGCCTCCTGCTGGCCGTGGTCAGTTTGGGGAGCCGGGCATCGCTGTCCGCCCAG TGCCCAGGAGGAGCTGGTGGCAGAGGAGCCAGGACCCGTCGGAACTGAATCCC TGCCCAGGAGGAGCTGGTGGTGGTAGAGGACCAGGACCGTCGGAACTGAATCCC AGAAGAAAGCCAGGATCCTGCGCCTTTCCTGAACCGACTAGTTCGGCCTCGCAGA ACCTAAAGGCCGGAAAACACGGGCTCGAAGAGCGATCGCAGCCCATTATGAAGTT ACCTAAAGGCCGGAAAACACGGGCTCGAAGAGCGATCGCAGCCCATTATGAAGTT AGCCAGAATCAACAGCTCCAGCCCTCTGCGCTACAACCGCCAGATCGGGGAGTTT Æ; Gaps Resnick 0, DB 6; Length 1364; BP; 246 A; 461 C; 394 G; 263 T; 0 U; 0 Other; 2; Indels ninety two polynucleotides derived from SH, Howes Score 1345.8; DB 6. rosis Factor family receptor polypeptides and ligands - agnosis and treatment of prostate cancer and developmental abnormalities.

Fig 13A; 156pp; English.

on describes isolated Tumor Necrosis Factor (TNF) family peptides: APO4, APO6, APO8 and APO9 or their active id isolated TNF related ligands 1 and 3 (TNFL1 and TNFL3) or

their active fragments. APO4 is useful for diagnosing prostate cace determining levels of APO4 in an individual. Prostate cancer can treated using APO4 selective binding agents linked to a therapeu moiety. APO4 polypeptides are also useful for identifying select binding agents, useful in diagnosis/treatment of disease by bind agents to the polypeptide/active fragment which is extracellular expressed on the cell surface. The binding is preferably perform vivo. APO4 polypeptides/ active fragments are also useful for sc for agonists and antagonists by binding and observing the change activity. Effective pharmacological agents useful in diagnosis of treatment of disease are also identified using APO4 polypeptides fragments and APO4 signal transducer molecules that specifically with a cytoplasmic domain of APO4 and detecting a change in leve activity. The method is performed in vivo or in vitro. APO polyper activity. The method is performed in vivo or in vitro. APO polyper activity are all useful as immunogens for preparing antibodies. APO8 was transfected to human breast carcinoma ce abnormalizines. 1 GTCAGTTTGGGGAGCCGGGCATCGCTGTCCGCCCAGGAGCCTGCCCAGGAGGAGC GCGCCTTTCCTGAACCGACTAGTTCGGCCTCGCAGAAGTGCACCTAAAGGCCGGA 121 GCGCCTTTCCTGAACCGACTAGTTCGGCCTCGCAGAGTGCACCTAAAGGCCGGAA CGGGCTCGAAGAGCGATCGCAGCCCATTATGAAGTTCATCCACGACCTGGACAGG 181 c\u00e3\u00e3c\u00e3a\u00e3\u 241 GCGCAGGCAGGTGTGGACGGACAGTGAGTGGCTGGGAGGAAGCCAGAATCAACAC AGCCCTCTGCGCTACTACCGCCAGATCGGGGGGTTTATAGTCACCCGGGCTGGGC 589 TACCIGIACTGICAGGIGCACTITGAIGAGGGGAAGGCIGICIACCIGAAGCIGG TACCTGTACTGTCAGGTGCACTTTGATGAGGGGAAGGCTGTCTACCTGAAGCTGG CTGGTGGATGGTGTGTGGTGCCTGCGTGCCTGGAGGAATTCTCAGCCACTGCGG TCCTCGGGCCCCAGCTCCGCCTCTGCCAGGTGTCTGGGGCTGTTGGCCCTGCGGCC recercesecentesecretesecassistes TCCTCCCTGCGGATCCGCACCCTCCCCTGGGCCCATCTCAAGGCTGCCCCCTTCCT TACTICGGACICTICCAGGITCACTGAGGGGCCCTGGTCTCCCCACAGICGTCCC 229 GICAGITIGGGGAGCCGGCAICGCIGICCGCCCAGGAGCCIGCCCAGGAGGAGG GCGCAGGCAGGTGTGGACGGGACAGTGAGTGGCTGGGAAGGCCAGAATCAACA 529 AGCCCTCTGCGCTACAACCGCCAGATCGGGGAGTTTATAGTCACCCCGGGCTGGGC CTGGTGGATGGTGTGCTTGCCTTGCGCTTGCAGGAATTCTCAGCCACTGCGG TACTTCGGACTCTTCCAGGTTCACTGAGGGGCCCTGGTCTCCCCACAGTCGTCCC GCCGGCTCCCCTCGACAGCTCTCTGGGCACCCGGTCCCCTCTGCCCCCACCTCAG GCCGGCTCCCCTCGACAGCTCTCTGGGCACCCGGTCCCCTCTGCCCCTCAGC TCCTCCCTGCGGATCCGCACCCTCCCCTGGGCCCCATCTCAAGGCTGCCCCCTTCC ٥; 60.7%; Score 833.4; DB 2; Length 1030; 99.9%; Pred. unosis Factor family receptor polypeptides and ligands - agnosis and treatment of prostate cancer and developmental abnormalities.

Fig 13B; 156pp; English.

on describes isolated Tumor Necrosis Factor (TNF) family peptides: APO4, APO6, APO8 and APO9 or their active of isolated Tumof APO9 or their active of isolated Tumof Indands 1 and 3 (TNRL1 and TNRL3) or fragments. APO4 is useful for diagnosing prostate cancer by evels of APO4 in an individual. Prostate cancer can also be APO4 selective binding agents linked to a therapeutic polypeptides are also useful for identifying selective is, useful in diagnosis/treatment of disease by binding of the cell surface. The binding is preferably performed in Typeptides/active fragment which is extracellular, or the cell surface. The binding as preferably performed in Typeptides/active fragments are also useful for screening and antagonists by binding and observing the changer in APO4 ective pharmacological agents useful in diagnosis or disease are also identified using APO4 polypeptides/active ammic domain of APO4 and detecting a change in level of APO4 method is performed in vivo or in vitro. APO polypeptides agnosis/treatment of developmental or gestational duced apoptosis
